Northwest Health Care Linen is...

The only laundry company committed exclusively to medical linen in the Puget Sound region. Since 1992, our family owned organization has provided comprehensive linen services to the health care industry only, with customers varying from single provider practices and surgery centers, to large clinic systems and hospitals.

As a leader in the industry, we're focused on providing the best in customer satisfaction and the best in company and environmental performance. We don't consider ourselves to be merely a vendor, but rather a collaborator in the overall success of our customers' facilities. At Northwest Health Care Linen, we believe it is our responsibility to make sound business decisions that prevent pollution and conserve our natural resources. To ensure that we meet the highest standard across all areas of our organization, we achieved accreditation from The Healthcare Laundry Accreditation Council (HLAC). Our unique approach to linen service consists of quality product selection, unparalleled customer support and a dedicated patient focus, making us...

*much more than
wash, rinse, repeat.*

CUBICLE CURTAIN SOLUTIONS

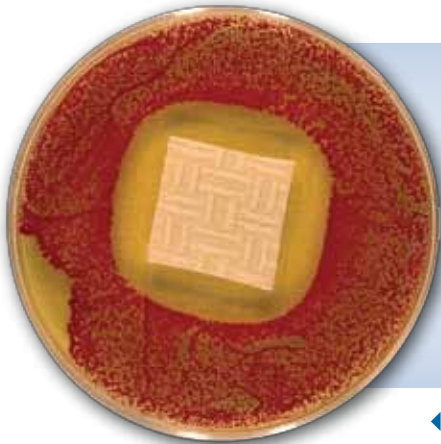

- In need of a cubicle curtain cleaning solution?*
- Concerned that your curtains are not cleaned often enough?*
- Worried that your curtains are not properly laundered and cared for?*
- Looking to improve patient satisfaction?*

As a focus of hospital-acquired infection reduction programs, there is more emphasis being placed on cleaning curtains regularly. The team at Northwest Health Care Linen offers real and immediate solutions for your facility.

ANTIMICROBIAL CURTAIN FABRIC

To reduce the adverse effects of infectious organisms, an antimicrobial finish is added to our curtain fabric. Fabric is treated with Zinc Pyrithione (ZnP), a durable, proven effective and safe antimicrobial compound that inhibits the growth of bacteria, fungus, mold and mildew.

- ✓ ZnP works as a cytostatic agent, preventing cellular growth and multiplication of bacteria
- ✓ FDA recognizes ZnP as a safe agent
- ✓ Increased infection control; barrier prohibits microorganism growth on or around the fabric

In a recent survey, 67% of infection control professionals agreed that antimicrobial cubicle curtains could help control infection rates.*

◀ A zone of inhibition is created that prevents the spread of bacteria.
*Antimicrobial cubicle curtain survey, APIC Conference, Cambridge, MA. 2006.
